

What is claimed is:

1. A multi-layered towel comprising:

an upper layer, which is water absorbent; and

a lower layer, which is at least water resistant;

5 wherein said upper layer has a first opening and said lower layer has a second opening, said upper and lower layers being attached to each other such that the first opening overlaps the second opening to define a first overlapping area.

10 2. The multi-layered towel defined in claim 1, wherein said lower layer is waterproof.

3. The multi-layered towel defined in claim 1, wherein the first overlapping area is large enough to accommodate a head of a person.

15 4. The multi-layered towel defined in claim 3, wherein said multi-layered towel is large enough to cover at least an upper torso of the person, said lower layer facing the upper torso of the person, said upper layer facing away from the upper torso of the person.

20 5. The multi-layered towel defined in claim 1, further comprising a flap extending from an edge of said lower layer that is defined by at least a portion of the second opening.

6. The multi-layered towel defined in claim 1, wherein said upper layer and said lower layer are attached to each other with thread.

5 7. The multi-layered towel defined in claim 1, wherein said upper layer and said lower layer are attached to each other using at least a section of Velcro, which is attached to one of said upper and lower layers, and which is disposed between said upper and lower layers.

10 8. The multi-layered towel defined in claim 1, wherein said upper layer has a first front portion and a first back portion, the first front portion having a first set of two opposing flaps including a first flap having a first inner portion and a second flap having a second inner portion, the first and second inner portions defining the first opening;

15 wherein said lower layer has a second front portion and a second back portion, the second front portion having a second set of two opposing flaps including a third flap having a third inner portion and a fourth flap having a fourth inner portion, the third and fourth inner portions defining the second opening;

20 wherein the first flap and third flap are on one side of the overlapping area; and

wherein the second flap and the fourth flap are on another side of the overlapping area.

9. The multi-layered towel defined in claim 8, further comprising a fifth flap extending from said third and fourth inner portions of said lower layer.

10. The multi-layered towel defined in claim 8, wherein at least one of the first and third flaps is made attachable to at least one of the second and fourth flaps.

11. The multi-layered towel defined in claim 8, further comprising an attaching device, wherein at least one of the first and third flaps and at least one of the second and fourth flaps are made attachable to each other via said attaching device.

12. The multi-layered towel defined in claim 11, wherein said attaching device comprises a first section of Velcro disposed on one of the first and third flaps and a second section of Velcro disposed on one of the second and fourth flaps, wherein the one of the first and third flaps and the one of the second and fourth flaps are made attachable to each other by the first and second sections of Velcro.

13. The multi-layered towel defined in claim 11, wherein said attaching device comprises a pin.

14. The multi-layered towel defined in claim 8, wherein said first, second, third and fourth inner portions each have a curved portion.

5 15. The multi-layered towel defined in claim 1, wherein the first and second openings each include a circular portion, and the first overlapping area is large enough to accommodate a head of a person.

10 16. The multi-layered towel defined in claim 15, further comprising a flap extending from an edge of said lower layer that is defined by at least a portion of the second opening.

15 17. The multi-layered towel defined in claim 15, wherein said multi-layered towel is large enough to cover at least an upper torso of the person, said lower layer facing the upper torso of the person, said upper layer facing away from the upper torso of the person.

18. The multi-layered towel defined in claim 1, wherein said upper layer is made from cotton.

20 19. The multi-layered towel defined in claim 1, wherein said lower layer is made of polyurethane.

20. The multi-layered towel defined by claim 19, wherein said lower layer is also made of polyester.

21. A method of making a multi-layered towel for a hair salon, said method comprising the steps of:

providing an upper layer, which is water absorbent;

making a first opening in said upper layer;

providing a lower layer, which is at least water resistant;

making a second opening in said lower layer; and

attaching said upper layer to said lower layer such that the first opening overlaps the second opening to define a first overlapping area.

22. The method defined in claim 21, wherein the first overlapping area is made large enough to accommodate a head of a person.

23. The method defined in claim 22, wherein said multi-layered towel is made large enough to cover at least an upper torso of the person, said lower layer being made to face the upper torso of the person, the upper layer being made to face away from the upper torso of the person.

24. The method defined in claim 21, further comprising the step of providing a flap that extends from an edge of the lower layer that is defined by at least a portion of the second opening.

25. A method of making a multi-layered towel for a hair salon, said method comprising the steps of:

providing an upper layer, which is water absorbent, said upper layer having a first front portion and a first back portion;

making a first set of two opposing flaps in the first front portion, the first set of opposing flaps including a first flap having a first inner portion and a second flap having a second inner portion, the first and second inner portions defining a first opening in said upper layer;

providing a lower layer, which is at least water resistant, said lower layer having a second front portion and a second back portion;

making a second set of two opposing flaps in the second front portion, the second set of opposing flaps including a third flap having a third inner portion and a fourth flap having a fourth inner portion, the third and fourth inner portions defining a second opening in said upper layer; and

attaching said upper layer to said lower layer such that the first opening overlaps the second opening to define a first overlapping area, the first and third flaps being placed on one side of the overlapping area and the second and fourth flaps being placed on another side of the overlapping area.

26. The method defined in claim 25, further comprising the step of providing a fifth flap extending from said third and fourth portions of said lower layer.

27. A multi-layered towel comprising:

an upper layer, which is water absorbent; and

a lower layer, which is at least water resistant;

wherein said upper layer has a first edge that is curved inward such that it

is contoured to the outline of a person's neck; and

wherein said lower layer has a second edge that is curved inward such that

is contoured to the outline of the person's neck, the second edge of said lower

layer extending beyond the first edge of the upper layer to create a first flap that

can be tucked under the neckline of the person's garment.

28. The multi-layered towel defined in claim 27, wherein said lower

layer is waterproof.

29. The multi-layered towel defined in claim 28, wherein said lower

layer is made of coated nylon.

30. The multi-layered towel defined in claim 27, wherein said upper

layer further comprises a second flap defined by the first edge of the upper layer,

which is made to abut the person's neck.

31. The multi-layered towel defined in claim 27, wherein said upper

layer and said lower layer are attached to each other with thread.

32. The multi-layered towel defined in claim 27, wherein at least a portion of said upper layer and said lower layer are attached to each other with thread that is sewn in a curved line that is contoured to the outline of the person's neck.

5

33. A method of making a multi-layered towel for a hair salon, said method comprising the steps of:

providing an upper layer, which is water absorbent, said upper layer having a first edge that is curved inward such that it is contoured to the outline of a person's neck;

10

providing a lower layer, which is at least water resistant, said lower layer having a second edge that is curved inward such that is contoured to the outline of the person's neck; and

attaching said upper layer to said lower layer such that the second edge of said lower layer extends beyond the first edge of the upper layer to create a first flap that can be tucked under the neckline of the person's garment.

15

34. The method defined by claim 33, further comprising the step of providing said upper layer with a second flap defined by the first edge of the upper layer, the second flap being implemented to abut the person's neck.

20

35. The method defined by claim 33, wherein the step of attaching comprises the step of attaching at least a portion of said upper layer and said

lower layer to each other with thread that is sewn in a curved line that is contoured to the outline of the person's neck.
